Professional Summary

Results-driven Full-Stack Developer with expertise in building scalable, AI-integrated web applications using Java, Spring Boot, and React.js. Proven track record in optimizing backend performance, implementing caching strategies, and managing CI/CD pipelines. Passionate about developing production-grade software that bridges complex AI inference with user-centric frontend experiences.

Technical Skills

Languages: Java, JavaScript, HTML5, CSS3, SQL.
Framework & Libraries: Spring Boot, React.js, Spring Data JPA.
Cloud & AI Platforms: Google Cloud Platform (GCP), Spring AI, Ollama.
Database & Caching: MySQL, H2, Caffeine Cache.
Tools & DevOps: Git, Docker, Maven, GitHub Actions, Postman, IntelliJ IDEA.

Experience

GlowLogics Solutions <i>Full Stack Java Intern</i>	Aug 2025 – Nov 2025 Bengaluru
- Engineered scalable RESTful backend services using Java and Spring Boot, resulting in a 15% improvement in API response efficiency. - Developed secure CRUD operations with Spring Data JPA and MySQL, optimizing database transaction reliability for high-concurrency environments. - Streamlined collaborative development by implementing automated API testing workflows with Postman, reducing integration-related bugs by 20%.	

Projects

OmniMind AI – Document Intelligence Sandbox <i>React.js, Springboot, Mysql, Ollama</i>	Github Link
- Designed and engineered an end-to-end Retrieval-Augmented Generation (RAG) system using Spring AI, Ollama, and React, enabling semantic search and analysis on large-scale PDF documentation. - Implemented a persistent MySQL storage layer, replacing in-memory H2, to improve data reliability and production readiness. - Optimized API latency by 30%+ by integrating Caffeine caching, preventing redundant AI inference and reducing local system load.	
RealTicker–AI-Powered Stock Insights Web Application <i>React.js, Spring Boot, Hugging Face</i>	Live Demo
- Built a full-stack stock insights platform using React, Vite, and Spring Boot to display top stocks, company details, and 6-month trend data through REST APIs. - Integrated Hugging Face AI analysis to generate stock summaries and implemented fallback logic to maintain reliable responses when inference was unavailable. - Added Spring Cache with Caffeine to reduce repeated processing and improve API response time for frequent requests by an estimated 15–30% in development testing.	
CapitalFinder- AI-Powered Capital Lookup Web Application <i>SpringBoot,HTML/CSS</i>	Live Demo
- Built an AI-powered capital lookup app with Spring Boot and a responsive frontend, deployed on Render using Maven, with Hugging Face API integration and secure secret handling. - Used a layered architecture with DTOs, services, and SOLID principles, and created a responsive glassmorphism UI with HTML, CSS, JavaScript, and Fetch API.	

Certifications

Gemini for App Developers on Google Cloud	June 2026
Website Modernization with Generative AI on Google Cloud	June 2026

Education

Jeppiaar Engineering College <i>Bachelor of Technology in Information Technology (GPA: 8.0)</i>	2022 - 2026 Chennai
