PROFESSIONAL SUMMARY

Aspiring Full-Stack Developer with hands-on experience in Java, Spring Boot, React.js, and AI-powered application development using OpenAI GPT APIs and Hugging Face. Skilled in building secure, scalable, and production-ready web applications with MySQL, JWT authentication, Maven, Docker, and GitHub Actions CI/CD .

EDUCATION

Jeppiaar Engineering College.

CGPA - 8.0

B.Tech - Information Technology 2022 – 2026

Bharathi Balamandir Matric Higher Secondary School.

Percentage : 89

Class 12th 2021 - 2022

TECHNICAL SKILLS

Languages : Java , JavaScript, HTML/CSS

Libraries / Frameworks : React.js, Spring Boot

Developer Tools : Git, Docker, VS Code, IntelliJ, Eclipse, Postman

Databases : SQL

DevOps : CI/CD (GitHub Actions)

PROFESSIONAL EXPERIENCE

GlowLogics Solutions

August 2025 – November 2025

Full Stack Java Intern

Chennai

- Developed RESTful backend services using Java and Spring Boot and integrated them with React-based frontend following MVC architecture.
- Implemented secure authentication and CRUD operations using Spring Data JPA and PostgreSQL to ensure efficient data persistence.
- Collaborated using Git, tested APIs with Postman, and worked in structured real-time development workflows.

PROJECTS

RealTicker–AI-Powered Stock Insights Web Application | *React.js, Spring Boot, Hugging Face* [Live Link](#)

- Built a full-stack stock insights platform using React, Vite, and Spring Boot to display top stocks, company details, and 6-month trend data through REST APIs.
- Integrated Hugging Face AI analysis to generate stock summaries and implemented fallback logic to maintain reliable responses when inference was unavailable.
- Added Spring Cache with Caffeine to reduce repeated processing and improve API response time for frequent requests by an estimated 15–30% in development testing.
- Deployed the application on Render with a static frontend build and modular backend structure to improve reliability and maintainability.

CureConnect - AI-Powered Healthcare Web Application | *FastAPI, Python, Scikit-learn, GNews API* [Live Link](#)

- Designed and developed CureConnect, an AI-powered healthcare web application that analyzes symptoms and delivers specialist recommendations using machine learning-based classification.
- Implemented secure, production-style authentication with JWT, refresh tokens, and hashed passwords to protect user data and sessions.
- Delivered interactive healthcare capabilities including voice input, real-time support chat, community symptom reporting, health news updates, and city health scoring using REST APIs and WebSockets.
- Built the system with FastAPI, Python, Scikit-learn, Pandas, Joblib, Tailwind CSS, Chart.js, Deepgram API, and GNews API, ensuring a responsive and scalable end-to-end application.
